ABOUT US

Ambit Automation has been successfully providing job oriented training for graduates in their stream of choice over the past half a decade. We are committed towards imparting knowledge and skill based training and thereby helping individuals and organisations achieve their goals. With our vast experience and research backed analysis we are foraying into Logistics Skill training. We understood from our research that there has been no formal training in the country to address the skill gap in the logistics sector. The programme offered is Internship-based UG Degree Programme, which has been designed with the primary objective of creating adequate skills for gainful employment at supervisory / managerial levels in Logistics Industry. The training is being conducted with our associate who has over 20 yr experience in the industry. We provide the best training which is practical with state of art training facilities and our successful inhouse training methodologies.

OUR MISSION

Our Mission is to leverage technology and impart, through experiential learning methodology, job oriented skills and Knowledge required for the logistics Sector

Our Vision is to be the preferred training partner for the Logistic Sector

OUR VISION

Logistics Management focuses on the movement and storage of items in the supply chain. Supply chain management (SCM) is more comprehensive, covering all of the coordination between partners that have a role in this network, including sourcing, manufacturing, transporting, storing and selling. The ultimate goal of SCM is to find processes that ensure a smooth, efficient flow of goods that give customers an excellent experience and drive the business forward.

Our program in Logistics and Supply Chain Management gives a great insight into the ever growing Logistics and Supply Chain Industry. Our experiential learning process is designed to inspire the aspirant to think in entrepreneurial way and be a part of the industry. The program provides case studies of various companies across various sectors and make the aspirant understand the evolution of the supply chain process. Efficient logistics and supply chain management has become essential for companies across all sectors ranging from Manufacturing, Medical, F&B, Retail, E-Tail and so on and so forth. Our Course is designed for aspirants who would like step in and make a mark for themselves in an industry, which is expected to grow at 10.7% per annum by 2030. The Following modules are covered in our program:.

Logistics management

Logistics management includes, sourcing, procurement, product planning, scheduling, packaging and assembling, warehousing and distribution..It also also ensures that products are shipped in the most economical, safe, efficient and timely manner. This results in cost savings for the company and more satisfied customers. Its process involves inbound out-bound and reverse logistics.

International business management

International business refers to the trade of goods, services, technology, capital and/or knowledge across national borders and at a global or transnational scale .It involves cross-border transactions of goods and services between two or more countries. Transactions of economic resources include capital, skills, and people for the purpose of the international production of physical goods and services

Warehouses management

Warehouse management is the process of storing goods which are to be distributed later. Warehousing includes stocking, maintaining and controlling your raw material, work in progress and finished goods. inventory. Warehousing is one of the important auxiliaries to trade. It creates time utility by bridging the time gap between production and consumption of good

Freight management

Freight is the goods transported in bulk by a truck, train, ship, or aircraft. Freight Management involves learning different modes of freight shipping, its advantages and disadvantages, and factors affecting it..

Retail management

Retail management is a sub-discipline of the general field of management that deals with overseeing the distribution and selling of products directly to consumers, in specific vending points such as shops, chain stores, markets and malls. Retail management saves time and ensure the customers easily to locate the desired merchandise and return home with satisfaction .Retail management has become one of fastest growing career in the industry with tremendous growth in the economy.

Marketing and service management

The execution of business activities that direct towards the flow of goods and services from producers to customer or end user. The role of marketing is predominant in be it in a B2c, B2B, Product Based or Service Bases businesses

Export and Import management

Export/Import Management aids in understanding international marketing, trade and the concept of foreign exchange. Export is the selling of goods or services from one country to another. Import is when one country buys goods or services from another. Exports and Imports are two critical components which maintain the economic well being of a country. The importance of understanding export/Import management is growing day by day due to accelerating globalization and improved trade.

Shipping management

Shipping Management is the process of planning and execution of the shipping process to ensure the smooth functioning of the same. It helps the companies to be streamlined and focus on each step of the process along the way. Often Shipping Management and Logistics Management are considered the same, but they are way different. They are interrelated but both hold their respective set of duties.

Organisational behaviour and management

Organizational behaviour is the: "study of human behaviour in organizational settings, the interface between humans, humans and the organization itself". The principles of the study of organizational behaviour are applied primarily in attempts to make businesses operate more effectively and efficiently.

Research methodology

Research is actually a voyage for getting knowledge. Research methodology simply refers to the practical "how" of any given piece of research. More specifically, it's about how a researcher systematically designs a study to ensure valid and reliable results that address the research aims and objectives. This subject provides a clear picture about how to conduct market research, surveys, data collection, analysis and interpretation and arriving at conclusion.
